php**S** Php**Storm**

PHP IDE that follows your thoughts

JetBRAINS
Develop with pleasure!

Key Features

## Explore Code with a Reliable Guide

Quick Navigation right from the editor:
- Go to declaration — navigates to where the function, variable or label in question is declared.
- Go to symbol — navigates to any symbol in project code.

How often do you navigate back to the place you changed last? PhpStorm always tracks your changes so all you have to do is press *Ctrl + Shift + Backspace*, and you will find yourself transported back to that location.

Find/Highlight Usages locates other places in your entire project where a given symbol is used, with quick preview and navigation to the actual usages:

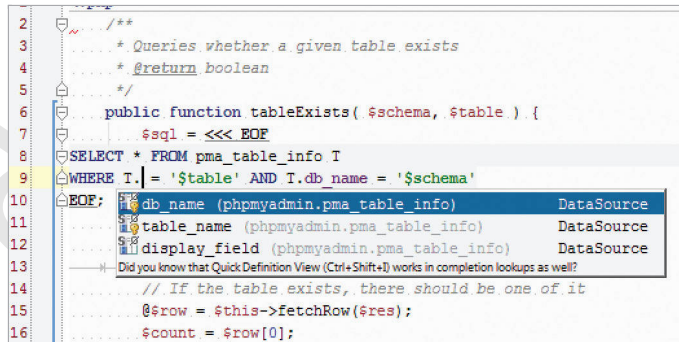

Code Faster with Smart Code Completion

PhpStorm will take care of details and make your coding faster. PhpStorm provides you with auto-completion for:
- PHP class properties and their types from constructor code
- HTML tags, attributes and styles
- JavaScript functions and event handlers
- function return type from its body

Do you use SQL inside PHP or HTML inside JavaScript?
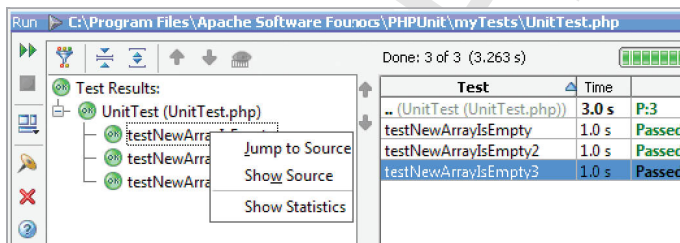

Check how a modern IDE such as PhpStorm handles this.

It's even able to suggest tablenames and fieldnames of your DataBase in SQL. Just link the IDE with your datasource:

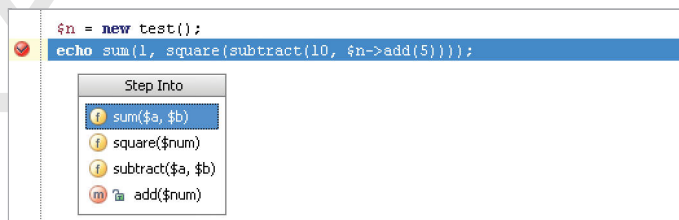

Test Carefully with PHPUnit

Develop PHPUnit tests, run tests quickly from directory, file or class and examine their results in the IDE.

Refactor Safely

Refactoring capabilities provided both for PHP, HTML and JavaScript allow you to easily and safely modify the code structure as well as undo any modifications:
- Smart Rename
- Generate Getter/Setter
- Extract Variable/Function
- Inline Variable/Function
- Move/Copy
- Safe Delete

Hunt Down Code Flaws with Xdebug or Zend

- Inspect variables and user-defined watches
- Evaluate an expression in runtime
- Set breakpoints & evaluate expressions in runtime
- Use smart step-into to examine a particular method from the call chain
- Debug remote applications

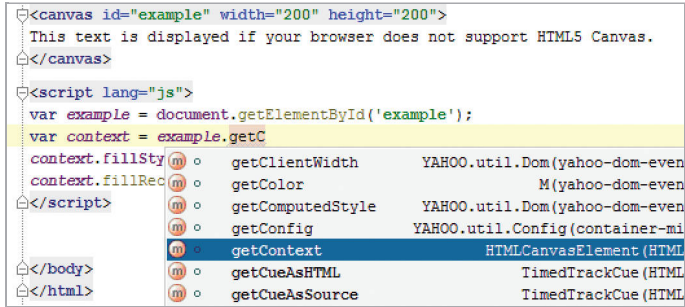

Zend Framework Support

Code generation through Zend_Tool integration and advanced navigation among components.
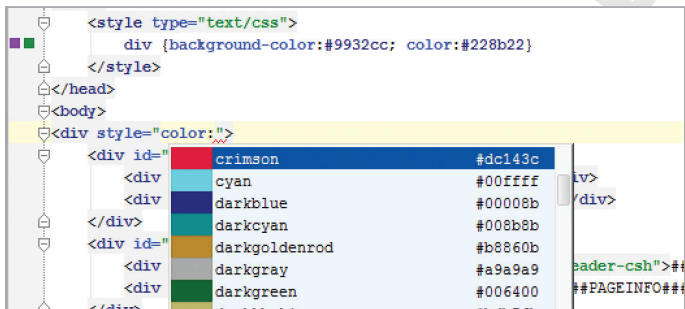

HTML & JavaScript

HTML5 Support

We are constantly improving the IDE to support new standards. Now you can easily enjoy HTML5 development with PhpStorm. The IDE understand HTML5 tags, attributes, and even helps you with the new JavaScript API:

```
<canvas id="example" width="200" height="200">
This text is displayed if your browser does not support HTML5 Canvas.
</canvas>

<script lang="js">
var example = document.getElementById('example');
var context = example.getC
context.fillSty  m  o   getClientWidth        YAHOO.util.Dom(yahoo-dom-even
context.fillRec  m  o   getColor                     M(yahoo-dom-even
</script>          m  o   getComputedStyle      YAHOO.util.Dom(yahoo-dom-even
                   m  o   getConfig             YAHOO.util.Config(container-mi
</body>            m  o   getContext            HTMLCanvasElement(HTML
</html>            m  o   getCueAsHTML          TimedTrackCue(HTML
                   m  o   getCueAsSource        TimedTrackCue(HTML
```

Quick Color Preview

We know: The Devil is in the details.

PhpStorm makes your work easier even when it comes down to little things like selecting the color of an HTML or CSS element. The editor visualizes the colors used in your code.

```
<style type="text/css">
    div {background-color:#9932cc; color:#228b22}
</style>
</head>
<body>
<div style="color:">
    <div id=       crimson          #dc143c
        <div       cyan             #00ffff    v>
        <div       darkblue         #00008b    /div>
    </div>         darkcyan         #008b8b
    <div id=       darkgoldenrod    #b8860b
        <div       darkgray         #a9a9a9    eader-csh">##
        <div       darkgreen        #006400    ##PAGEINFO###
```

Validation and Quick-Fixes

PhpStorm detects and suggests auto-fixes for such problems as:

- missing closing tags
- wrong references to files
- duplicate attributes
- invalid CSS selectors
- unused JS parameters
- and more...

```
login.html ×   browse_links.js ×   class.ux_t3lib_db.php ×   adodb-datadict.inc

div#login a#logo img

<input type="hidden" name="p_field" value="" />
<input type="submit" name="commandLO" class="t3-login-submit" />
<div id="login">
  <a id="logo">
      <img src="sysext/img/logo.gif" width="100" />
                                    Original image width is 124 more
  Set width value to 124  ▶  kin/icons/logo-openid.png" width="10" />

  <input type="submit" name="commandLI" id="t3-login-submit"/>
  <div class="t3-login-form-footer">
```

JavaScript Debugger Based on Mozilla

PhpStorm provides a complete range of features for JavaScript Debugging:

- Customizable breakpoints in HTML and JavaScript
- Frames, variables and watches views in the Debugger
- Runtime evaluation of JavaScript expressions

High-Speed Coding

HTML Editor allows you to utilize all the power of Zen Coding.

Type `div.feature>h4+p`, press **TAB** and you'll get

```
<div class="feature">
<h4></h4>
<p></p>
</div>
```

IDE Generic

Version Control Integration

PhpStorm supports most popular Version Control Systems: Subversion, Perforce, Git, Mercurial, CVS, etc.
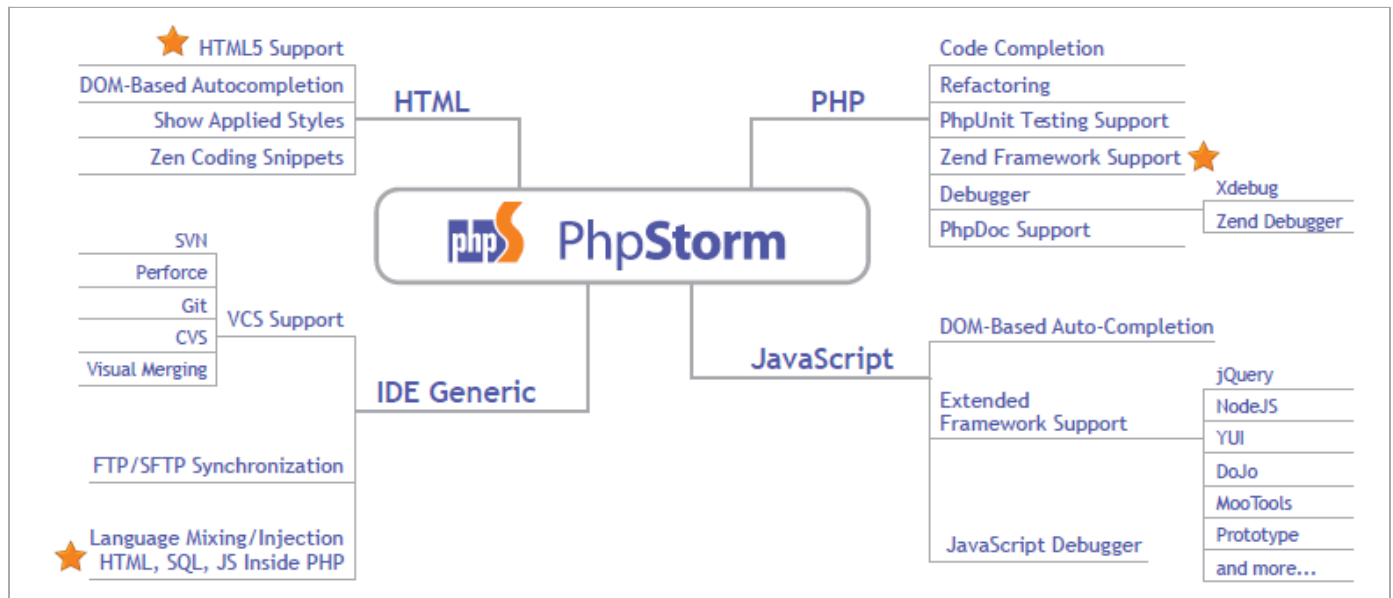

A built-in visual merge tool resolves all conflicts in a quick and intuitive manner.

The changes made locally are highlighted as you type in the editor gutter.

Remote Project Synchronization

Synchronize your project files with remote server(s) via FTP, with a network drive, or with one or more remote hosts.

Edit remote files locally and deploy back to the server using automatic synchronization on file save.

PhpStorm Licensing and Pricing

Commercial License	Personal License	Classroom License	Open Source Project License
For companies, and organizations	For individual developers	For trainers and educational institutions	For open source projects developers
